

## PRO SERIES DISC MOWERS

### THREE MOWERS WITH TECHNOLOGY YOU'LL FIND ONLY FROM MASSEY FERGUSON

Every hay farmer wants the perfect cut. But today, you also need more perfect days, days where you can work faster to achieve the highest capacity, with safeguards that reduce downtime, maintenance and manpower. You'll find them in the three Massey Ferguson Pro Series disc mowers.

#### DRIVEGUARD CUTTERBAR PROTECTION SYSTEM

Our exclusive driveGUARD™ cutterbar protection system prevents damage to the internal cutterbar components. If the mower encounters a rock or foreign object, the shear disc will break, leaving the mowing disc in place, preventing it from flying off when the securing system is released. Shear disc replacement is easy, economical, and can be done in minutes, right in the field.

**REMOVABLE TINE CONDITIONER** The removable tine conditioner is unlike any other. Our unique coil design gently conditions and aerates the crop for accelerated drying times. It takes mere moments to attach or remove. (Optional on DM255-P and DM306-P.)

**ROLLER CONDITIONER** Hard stalks are squeezed through the rubber rolls and the delicate, nutrient-rich leaves are preserved. Adjustable contact pressure of the rubber rolls suits various crop conditions, improves crop quality and reduces dry down time. Conditioners are removable. (Optional on DM255-P.)

**COMPACT MODULAR ANGLE CUTTERBAR** The low-profile, lightweight and shaft-driven compact modular angle cutterbar boasts a double-bevel gear design. This allows the mower to run at a shallower angle, making the operation more quiet, improving cut quality, optimizing efficiency and extending the life of the cutterbar.
